Atmosphere center - 40 000 sq.m

Flat House - 70 000 sq.m
Mall - 20 000 sq.m
Parking - 10 000 sq.m

To be better

Being better is the desire for development, the desire to improve skills, the search for new approaches and creativity. It is a challenge to make each next project better than the previous one.

To do it right

To do it right is to adhere to best practices in decision making, it is the prevention of risks and creating the conditions for achieving the best result.

To think about the future

Thinking about the future is a daily activity aimed at understanding the consequences of our own actions, making effective decisions, and anticipating the future.

Modern Architecture

UVT group architectural solutions strategy: functionality, environmental friendliness, and modernity. We anticipate the customer's expectations - these are buildings built for decades ahead.

Stylish Design

We are developing spaces that last a long time. A dwelling, office, or public building should be cozy. Style, comfort and functionality are the metrics of our result.

Comprehensive Engineering Solutions

The UVT group uses the latest engineering systems and technologies that provide the best energy efficiency of the building according to EN (A, B), LEED, BREEAM standards.

BIM

We carry out work projects in different countries of the world. Thanks to this our projects have modern technological solutions. BIM-designing moves forward construction technologies and adds value to the site. This technology allows us to predict and control the costs of a project, make changes quickly, combine many specialists in a single model, and assist in the operation of buildings.

Civil Aviation Objects

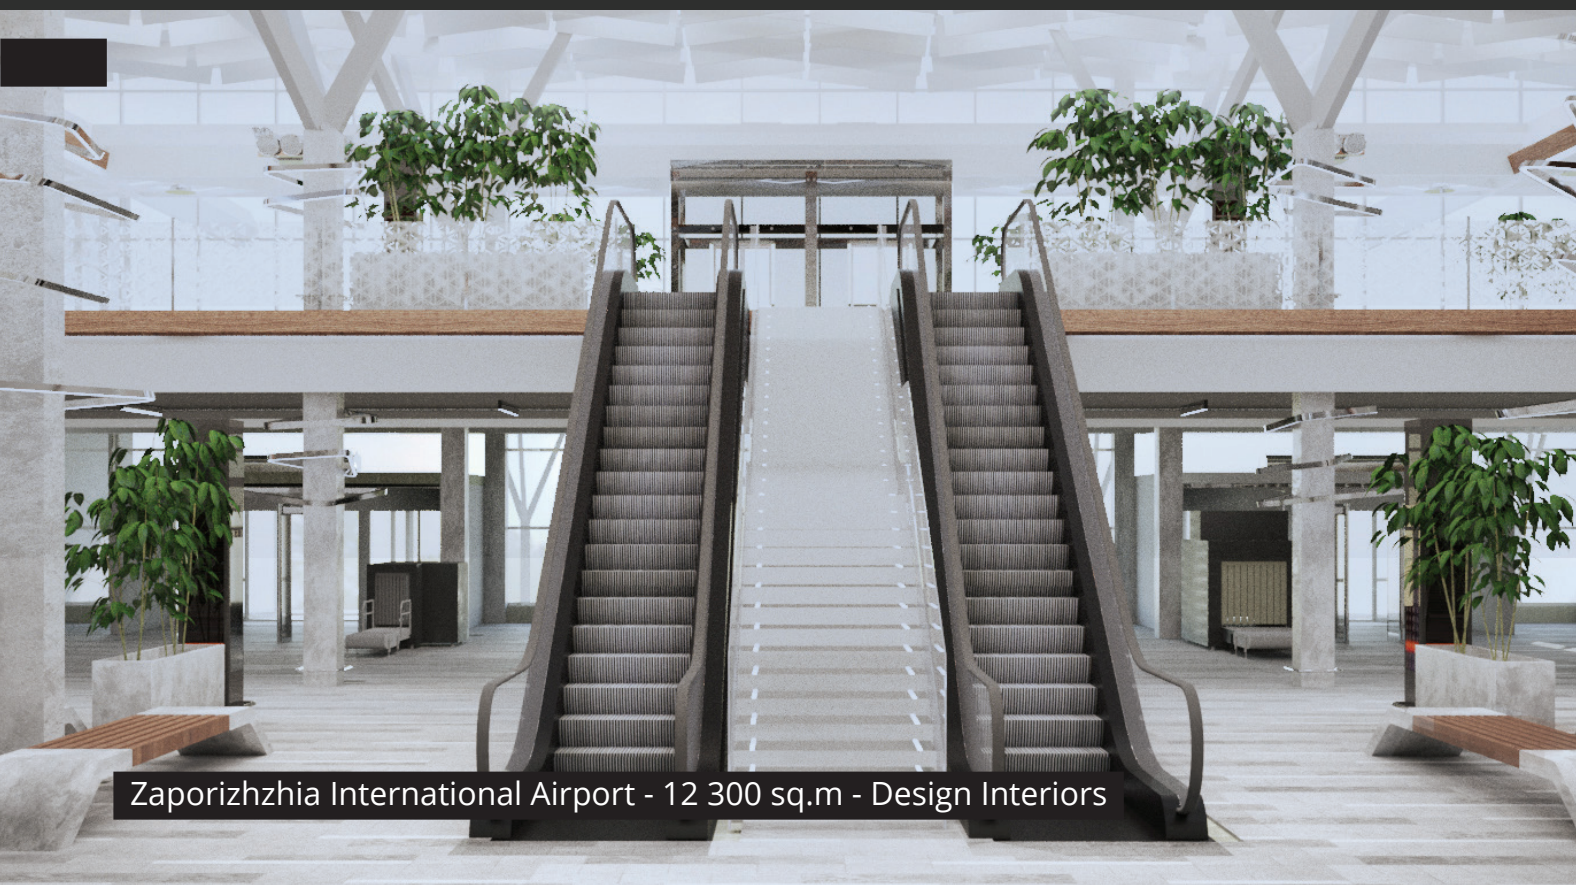

The UVT group has many years of experience in the design and operation of civil aviation facilities. This helps to implement projects tailored to the needs of the customer, IATA, ICAO requirements, ensuring a comfortable stay of passengers.

Reconstruction, Design, Energy Efficient Buildings

The main requirements for the design of an energy-efficient buildings are: reducing energy costs, water consumption, reducing CO2 emissions, and using renewable energy sources. We combine compliance with these requirements with modern architecture, technological fencing, translucent constructions, and engineering communications, providing the highest class of energy efficiency A and B.

BIM & VR Technology

We set up and manage outstaffing teams for international partners. We see property technology globally and Ukraine as a centre of growth and innovation with a vast pool of talented technicians to draw on. At UVT we have worked on international prestigious projects and have the experience to help you grow.
